INTRODUCTION

TEAM PRESENTATION

NEED

Open house at eXia allows people to discover the school. They are mainly on last year of their high school and passionate of IT but they know the métier through website, video games... but not through IT job. A platform allowing them to know what they can do in IT could help them and allow us to know them more.

DELIVERABLE

To do this we have to build an application which contain two dimension:

Orientation dimension: Allows the candidate to fill a questionnaire in order to help him finding the best job for his profile and it allows admin to manage the questionnaire.

Game dimension: Allows the candidate to test his IT knowledge and it allows admin to manage the game.

FEATURES

For each dimension we have to develop features which will allow to the application to fit to the need.

TOOLS & SOFTWARE
